- VS Code

PROJECT EXPERIENCE

Message Posting - A little website based on React&Redux

June - July, 2019

- Use React AND Redux with the create-react-app boilerplate code
- Use express for the backend and MongoDB to store the data
- A textarea, to write out a message, as well as a button to add the message to a list.
- A list, made up of list items that contain the message text

Game4Fun - A game reviews website

March - April, 2018

- Built a game review website which allows users to get the latest game information, and write reviews and commentaries. Designed and built login and registration system
- Used **HTML** to build website and PHP as script for action
- Wrote **SQL** to fetch and store the data into database
- Used **Git** as version control tool

WStore - Full stack web development project

June - July, 2017

- Use MERN stack to build a platform for customers who want to shop online and the merchants who want to sell their product.
- We store the data of setting up, customer information and item information and merchant information.
- Merchants are able to add, edit and delete data of the items owned by him
- Merchants can also create and update their own merchant data
- Customers will be able to create and update their data of their own customer's data
- For system admin, they can manage the data of setting up for merchants
